

Mental Health Complaints Commissioner

Regarding, the state of Victoria, Australia

& The Victorian Mental Health Acts

The person responsible

martin.foley@parliament.vic.gov.au

1. The nebulous violent Victorian Mental Health Act, that discriminates on the basis of perceived disability, that is human traits of: cognitive and social diversity. And subjects people to the servitude of psychiatrists' lucrative human experimentation research.
2. Forcing a person who is suffering from Multiple Chemical Sensitivity, and/ or Electrical Sensitivity, into a hospital setting, without even taking into consideration that MSC or ES is the reason for the person's distress. Then, making a person's suffering dangerously worse by forcing chemicals into that person's body, against their wishes. Forcing them to eat food that is filled with those same preservatives that are making them suffer, then calling this 'medicine.'
3. Research without Consent, forced on people. When an agreement is extracted from a person who has/ is involuntary, this not a true agreement to be part of Human Research, rather an agreement under duress, where a person is wanting to escape further arbitrary detention, and worse torture psychiatrists call 'medicine.'
4. Human Rights issues being turned into 'medical complaints' and negligence issues, when the rights of so many citizens of Victoria are being most horribly violated under government legislation: Mental Health Acts.
5. Ignoring the victims of psychiatrists who speak out against their oppressors, the government and psychiatrists, who torture and arbitrarily detain them.
